Products

This report examines sales trends and patterns for the 2019 electronics market. Analyzing data across a wide range of products, from everyday essentials like charging cables and headphones to major appliances like washing machines and monitors, the aim is to identify key insights that can inform future business decisions.

The year started slow, with revenue and orders hitting their lowest point in January. Things picked up quickly though, reaching their peak by April. From there, it was a gradual decline back to January levels by September. The final quarter brought a resurgence, although, November saw a dip before things finished strong in December.

Order and Revenue by Month

Throughout the week, order volume follows a distinctive pattern. Tuesdays see a surge, making them the busiest day, while Fridays experience a notable dip, becoming the quietest. The remaining days hover around a consistent average.

However, in a typical day, order volume peak around lunchtime (11am-1pm) and again in the evening (6pm-8pm). They steadily rise from dawn (3am) to morning (10am) and wind down from evening (8pm) to midnight.

Weekly Order Trend

Daily Order Trend

Four major cities – San Francisco, Los Angeles, New York City, and Boston – surpassed the 10% mark in both order volume and revenue. San Francisco dominated, contributing over 20% to the total.

There's a negative correlation between products' prices and their order volume. The expensive products have the lowest orders.
